

MOTUS LASER HAIR REMOVAL

Motus is the newest advancement in Laser Hair Removal. It works on all skin types with the Alexandrite Laser, and is truly a pain free treatment.

- Make sure to shave prior to your appointment
- An average of 6-8 treatments are needed (approximately 6-8 weeks apart), although individual results will vary. Generally:
 - Younger patients may need more treatments
 - Patients on bio-identical hormones may need more treatments
 - Patients with polycystic ovarian disease may need more treatments
- The Laser targets dark hair and will not work on red, blonde, or grey hair
- No tanning prior to treatments (this includes spray tans or tan accelerator), as the laser targets melanin (pigment) and tanned skin will correlate to the lower settings, which may impact outcomes
- No waxing or tweezing. However, you should shave prior to treatments, as the hair needs to be in the follicle for the laser to be absorbed down to the bulb
- There is gel that is placed on the skin which will be wiped off at the end of treatment
- Please try to keep a 6-8 treatment plan
- It truly does not hurt
